

## gliogenesis

tight junction assembly establishment of glial blood-brain barrier

septate junction assembly

apical junction assembly

glial cell differentiation establishment of blood-brain barrier

tight junction organization

multicellular organism aging

glial cell development

determination of adult lifespan cell migration involved in gastrulation

embryonic morphogenesis

sphingolipid metabolic process

size

p.adjust

0.9079716

positive regulation of multicellular organism growth regulation of actin cytoskeleton organization

embryo development regulation of actin filament-based process

gland development

regulation of cytoskeleton organization

epithelial cell migration, open tracheal system

cellularization

protein polymerization

cytoplasmic microtubule organization

small GTPase mediated signal transduction

Rab protein signal transduction regulation of exocytosis
