

tube development animal organ morphogenesis

regulation of cell shape

epithelium development

imaginal disc development

regulation of cellular component organsitive regulation of cellular process

regulation of actin filament organization

actin filament-based process

regulation of supramolecular fiber organization nervous system development

positive regulation of biological process

regulation of Rho protein signal transduction

actin cytoskeleton organization regulation of developmental process

regulation of actin filament-based process

anatomical structure morphogenesis

regulation of actin cytoskeleton organization

Rho protein signal transduction

animal organ development positive regulation of cellular component organization

regulation of cytoskeleton organization supramolecular fiber organization

actin filament organization regulation of organelle organization

regulation of actin polymerization or depolymerization positive regulation of Rho protein signal transduction

regulation of cell morphogenesis

regulation of actin filament length actin polymerization or depolymerization
