

## adult locomotory behavior epithelial cell morphogenesis

protein-containing complex localization

leg disc morphogenesis

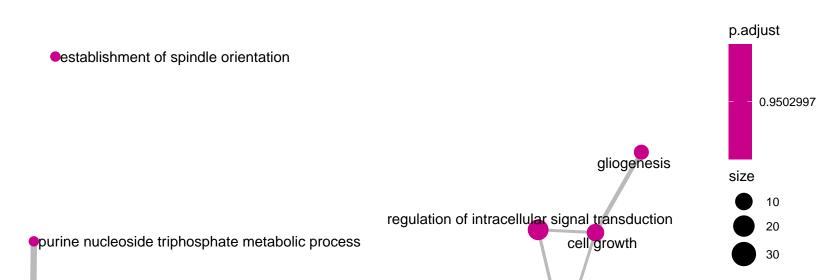

glycolipid metabolic process

positive regulation of Rho protein signal transduction

liposaccharide metabolic process

imaginal disc-derived leg morphogenesis

response to topologically incorrect protein

purine ribonucleoside triphosphate metabolic process

response to stress

regulation of response to stress

regulation of protein catabolic process defense response to bacterium

multi-organism process

regulation of response to external stimulus

positive regulation of cellular catabolic process pogenesis respon

response to bacterium oogenesis

vacuole organization positive regulation of catabolic process

clathrin-dependent endocytosis

positive regulation of autophagy

mitotic cytokinesis
