

hormone activity

signaling receptor binding non-membrane spanning protein tyrosine kinase activity

kinase activity

signal transducer, downstream of receptor, with serine/threonine kinase activity binding

adenyl nucleotide binding

protein binding, bridging protein tyrosine kinase activity

transferase activity, transferring phosphorus-containing groups by transferase activity, alcohol group as acceptor cysteine-type perfections.

inositol phosphate phosphatase activity protein kinase activity

adenyl ribonucleotide binding purine ribonucleoside triphosphate binding

protein serine/threonine kinase activity molecular adaptor activity

signal transducer activity, downstream of receptor

Wnt-protein binding protein heterodimerization activity

transmembrane receptor protein kinase activity MAP kinase kinase kinase activity

signal transducer activity

transmembrane receptor protein tyrosine kinase activity kinase binding

protein kinase binding

mitogen-activated protein kinase kinase binding
