

protein glycosylation

glycosylation

cellular macromolecule biosynthetic process

glycoprotein biosynthetic process

peptide biosynthetic process

macromolecule glycosylation

regulation of cellular amide metabolic process

macromolecule biosynthetic process

negative regulation of signal transduction

glycoprotein metabolic process translation

regulation of translation

posttranscriptional regulation of gene expression

negative regulation of cell communication

negative regulation of signaling

memory

size

25 50

p.adjust

0.90

protein modification by small protein conjugation

protein ubiquitination

pyrimidine-containing compound metabolic process

nervous system process

protein modification by small protein conjugation or removal

immune system process

synaptic vesicle priming

regulation of peptide secretion

negative regulation of synaptic transmission

hormone transport

signal release

exocytic process

regulation of protein secretion

regulation of neurotransmitter levels
