

## active transmembrane transporter activity

cofactor binding

transmembrane signaling receptor activity

excitatory extracellular ligand-gated ion channel activity

ATPase activity

size

2.5

5.0

7.5

0.8901549

p.adjust

ATPase activity, coupled to transmembrane movement of substances

metal ion binding

protein heterodimerization activity

ubiquitin-protein transferase activity

hydrolase activity, acting on acid anhydrides, in phosphorus-containing anhydrides transferase activity, transferring sulfur-containing groups

ubiquitin-like protein transferase activity

guanyl-nucleotide exchange factor activity

protein dimerization activity

hormone activity

Rho GTPase binding

nucleoside-triphosphatase activity

ATPase activity, coupled to movement of substances

cation binding
primary active transmembrane transporter activity
acetylcholine-gated cation-selective channel activity

hydrolase activity, acting on acid anhydrides

cysteine-type endopeptidase activity

peptidoglycan muralytic activity

dioxygenase activity

endopeptidase activity

ATPase activity, coupled

P-P-bond-hydrolysis-driven transmembrane transporter activity

Rho guanyl-nucleotide exchange factor activity

pyrophosphatase activity
